

AMENDMENTS TO THE ABSTRACT:

Please replace the Abstract on page 36 of the translation of the PCT Application with the attached unnumbered page containing an Abstract of the Disclosure.

ABSTRACT OF THE DISCLOSURE

A component operating with surface-proximal acoustic waves, in particular a filter with novel structure, has interdigital transducers arranged in serial and parallel branches, which are acoustically coupled with one another in
5 different configurations. The component provides a loss-poor filter with simultaneously space-saving arrangement of the filter elements.
